

ABSTRACT

Cargills Quality Food (Pvt) Ltd produces fresh retail cuts & large number of processed meat products. Beef is mainly used for the retail cuts. Sirloin, top side, fillets, rib stake & ox liver are the most popular retail cuts. Other than beef, pork & mutton retail cuts also available.

The leading processed meat items are chicken sausage, chicken meatball, cooked ham, streaky/back bacon & some bomb items.

Smoked duck, roasted duck, smoked turkey, roasted turkey & x'mas leg of ham are the products specially produced for the Christmas season.

During my in plant training, I have studied production process of these value added products & separation of retail cuts.

As a project I proposed conveyor system for transport carcasses to chillers & to facilitate proper storage inside the chillers. Extended conveyor path will transport carcasses from chillers to the deboning tables for deboning operation.
