

## SYNOPSIS

Industrial in plant training program is a mandatory of second semester of fourth year academic activities of Faculty of Livestock Fisheries & Nutrition in Wayamba University of Sri Lanka. Objectives were to acquire some knowledge about work place, work process, professional responsibilities and management as well as interrelate with the industry. To obtained knowledge about sea foods expose my industrial training to TESS AGRO PLC at Kelaniya and it is the pioneer in the sea foods industry and the one of the leading exporters in Sri Lanka.

TESS AGRO produces only fresh products. So they need high quality raw materials. They receive all the raw materials from the Indian Ocean by carefully selected suppliers. Their main product is Tuna. Other than tuna they produce Sword fish fillets and whole Reef fish species. There are major three parts in the company. Receiving area, Production area and Packing area are those three parts. All three areas are maintained very hygienically. They have their own quality policy and also they have their own HACCP plan. Other than those things they followed are GMPs and SSOPs.

They have well maintained water treatment plant and also waste water treatment plant. As a BOI company it is essential to have both these plants. Not only that they have laboratory facilities to check the histamine level.

During this training could communicate different levels of working environment and learnt how to work with them, with image and reputation using my talents and skills.
