

Synopsis

King Aqua Services (Pvt) Ltd is the leading company in Sri Lankan aquaculture industry. They involve in all activities in shrimp farming including shrimp hatcheries, aqua laboratories, and shrimp feed distribution, shrimp farming and provides aquaculture services.

Cluster shrimp farm, Vattavan is one of the shrimp farms manage by King Aqua Services (Pvt) Ltd. King Aqua Services (Pvt) Ltd and Vattavan Vakaraai Shrimp Farmers' Association are the share holders of the cluster shrimp farm.

I carried out the in-plant training in the cluster shrimp farm for ten weeks period of time. The objectives of my in-plant training are familiarized with shrimp farming technologies, observe the farm management activities and get the knowledge related to the shrimp farming.

I familiarized with lot of shrimp farming activities during the training period such as measure the water quality parameters, broad cast the feeds, and observe the feed tray, familiarized with the beneficial bacterial culture, participated in the routine management activities and shrimp harvest.

They follow lot of best management practices such as maintain the reservoir tank, maintain the sedimentation tank, use the standard filter net in the inlet etc. however, some labors in the farm don't have enough knowledge related to their work. So, I suggest that there should be periodical training program need to improve the employees' ability.
