

## Synopsis

This report outline the information gathered during my industrial training programme at JP FRESH PRODUCTS (Pvt) Ltd. which is one of the leading entrepreneurs engaged in processing & exporting fresh chilled fish in Sri Lanka.

In this report a special consideration has been given to the quality assurance department where I was attached during my training. Quality assurance department can be considered as the most important functional division in the company. I was able to obtain a vast knowledge about documentation, certification and quality assurance of products manufactured. Apart from the quality assurance, I was able to acquire experience in production systems and it enabled me to apply and convert the theories which I learnt into practice

Apart from the training program I got the opportunity to carry out case studies based on Determination of shelf life of tuna (*Thunnus albacares*) using Histamine content and Microbial content.
